

1. `if (!printf("I Love"))`
2. No Match
3. D) 3
4. `void *realloc(void *ptr, 0);`
5. B) toomuchfun 0 1 2 3 4 5 6 7 8 9 a b
6. `#include <stdio.h>`  
`int main()`  
`{`  
`if(printf("\`Anticoding is FunC\`"\n"))`  
`{ }`  
`}`
7. B , Here we do not use any brackets in conditional place of for loop, thus compiler will consider that two conditions are given in this place, thus  
`i< 0 // fails for the first iteration itself`  
`5 // which is infinite as 5 nevee becomes 0.`
8. 0 0 1 3 1 ,+2 for each correct number
9. A)
10. By using main we can implement infinite loop as shown below.(Recursion)

```
#include<stdio.h>
void main()
{
printf("Hello");
main();
}
```
